WHO ARE WE?

Bicycle route planner Germany

A number of federal states operate their own digital cycle route planners. These systems work with state-specific data and technically different approaches.

Under the project “Bicycle route planner Germany”, several federal states have joined together to develop cross-border and supra-regional planning of cycling routes and be able to provide further information.

The aim is to offer a routing for (multi-day) cycle tours along the signposted “premium routes” of the federal states.

HOW DOES IT WORK?

Routing throughout Germany

The basic idea of the “Bicycle route planner Germany” is to make cross-border cycling user-friendly by means of a central system. An optimal route is calculated using the results of the participating federal state cycle route planners. The overall system displays the route sections calculated by the cycle route planners on an overview map and allows the GPS track created to be downloaded for further use. The individual systems can be accessed for detailed view and the sub-routes can be changed as desired and all functions of the bicycle route planner can be used.

THIS CONCEPT HAS MAJOR ADVANTAGES

- ✓ *Planning cycling trips across federal state borders*
- ✓ *Central routing*
- ✓ *Highest possible data actuality*
- ✓ *Download GPS data for further use*
